The Maersk Mc-Kinney Møller Institute
Project Report**

Student Name:	Student ID Number:
YOU	ID

Class and Year	Master of Science in Engineering Drone Technology and Autonomous Systems 2025–2027
Subject Code and Name	T550021101-1-F26 Kunstig intelligens værktøjer, (F26)
Lecturer Name(s)	Vinay Chakravarthi Gogineni/Smith Khare/ Orkun Furat
Title	Your project title
Other Group Members	Leave this blank if you work alone
Submission Date	28-05-2026 (Need to confirm)

Academic Integrity and Plagiarism

Plagiarism is the act of copying, including or directly quoting from, the work of another without adequate acknowledgment. All work submitted by students for assessment purposes is accepted on the understanding that it is their own work and written in their own words except where explicitly referenced using the correct format. For example, you must NOT copy information, ideas, portions of text, data, figures, computer programs, etc. from anywhere without giving a reference to the source. Sources can include websites, other students' work, books, journal articles, reports, etc. Self-plagiarism or auto-plagiarism is where a student re-uses work previously submitted to another course within the SDU or other Universities.

You must ensure that you have read the SDU regulations relating to plagiarism.

I have read and understood the SDU code of practice on plagiarism and confirm that the content of this document is my own work and has not been plagiarized.

Abstract

The abstract should provide a comprehensive overview of your task, detailing the problem you are addressing, the algorithm you have selected/developed/applied, the dataset you used for evaluation, and the results you obtained. Please ensure the structure reflects a typical computer vision paper, focusing on clarity and conciseness.

Please note that the title page, abstract, table of contents, and pages containing references are not included in the final report length. Ensure that the main body of the report does not exceed 7-8 pages.

Contents

1	Introduction	1
2	Related Works	1
3	Methodology	1
4	Results	1
5	Discussion and Conclusions	1
6	Reflection	1

1 Introduction

This section should clearly describe your selected task. For example, if your task is image classification, begin by explaining what image classification is, why is its significance, and where it is commonly applied in real-world scenarios.

About $\frac{1}{2}$ page.

2 Related Works

You should describe the state-of-the-art (SOTA) deep neural networks relevant to your task. After presenting these methods, clearly justify the motivation behind choosing your specific algorithm. For example, if you selected MobileNet for an image classification task, explain why MobileNet was preferred over other SOTA models, highlighting its advantages in the context of your application.

About 1 page

3 Methodology

Describe the model architecture, dataset, pre-processing steps (if any), training strategy details (optimizer, loss, etc.), evaluation metrics, and implementation details. Please make sure that all the figures should be clear and must have a caption. Further, equations should be numbered correctly. Also, all the variables in the equations should be explained.

About 2 pages

4 Results

Summarize model performance, loss, accuracy (vs epoch) plots, confusion matrix, and any key visualizations. Make sure you compare your results with at least one of the SOTA algorithm. You are allowed to compare your results with your other group member results (provided you are implementing different algorithms/models). please make sure that the plots should have x and y labels along with their units (if any).

About 2 pages

5 Discussion and Conclusions

Discuss findings, implications, and limitations.

About $\frac{1}{2}$ page

6 Reflection

Briefly summarize your experience in implementing this task and your observations/achievements, and future directions.

About $\frac{1}{2}$ page
